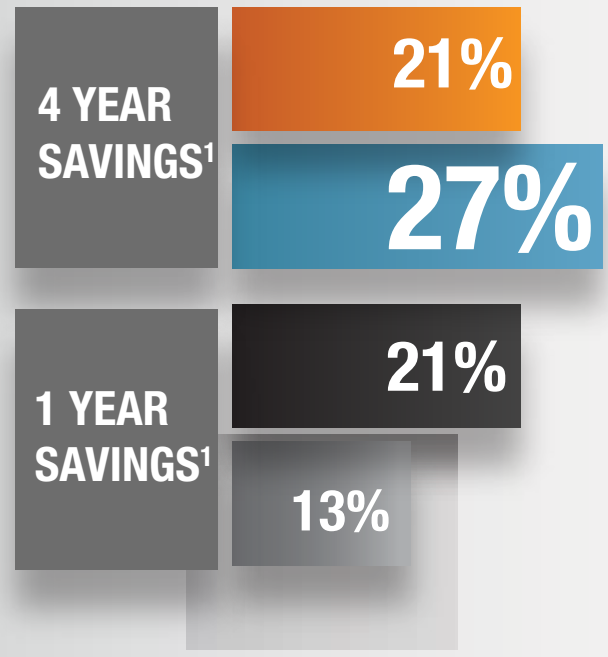
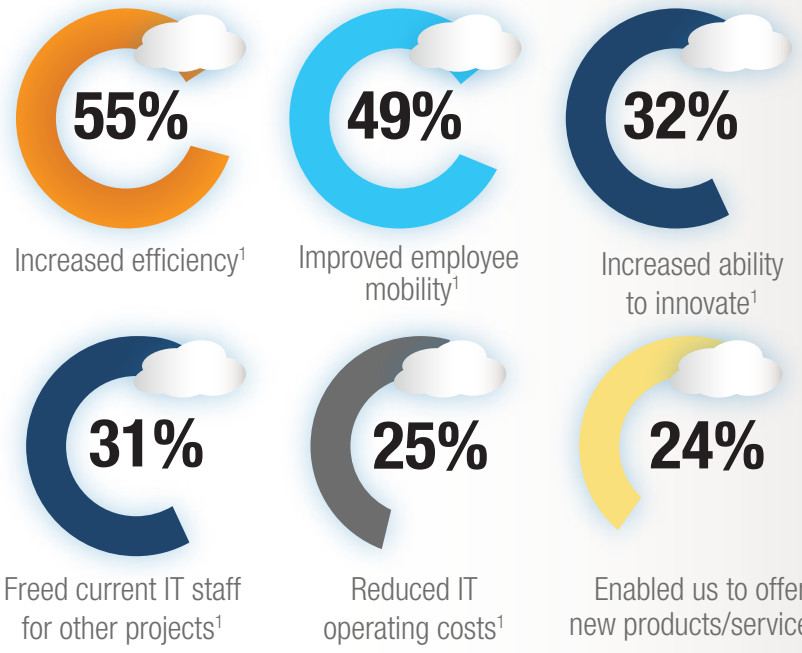
# MaaS... BRINGING MEDICAID TO THE CLOUD

Medicaid as a Service

## Cloud users project higher savings than non-cloud users, by estimates of:



## Cloud users say they have experienced



In 2012 **35%** of healthcare organizations are implementing or maintaining cloud computing.[1]

**88%** of healthcare organizations that utilize cloud computing have reduced IT costs by an average of **20%** annually according to CDW survey.[2]

# THE FUTURE OF MEDICAID ENTERPRISE

**Based on the Medicaid Information Technology Architecture (MITA) Framework**
**Supported by Centers for Medicare and Medicaid Services (CMS)**

## Medicaid as a Service (MaaS)

**50%**

### CMS Savings

CMS could realize approximately a 50% cost reduction in its federal matching funding contribution.[3]

**40%**

### State Implementation Costs

States could reduce overall implementation cost by 40%.[3]

**40%**

### Operational Costs

Initial cost benefit analysis indicates that over a five-year period overall operational cost could be reduced by 40%.[3]

### Time Savings

Subscribing to the cloud reduces implementation time by up to 2 years. Pre-existing knowledge, resources and infrastructure that may be shared between states decreases the time required for almost every phase of procurement and implementation.[3]

### Cost Savings

Implementation including up-front expenditures, operations and maintenance, and infrastructure costs are dramatically reduced in the cloud – for both CMS and each state involved.[3]

### MaaS is Secure

MaaS meets security requirements like authentication,authorization, availability, identity management,integrity and incidence response.[3]

As new States join the cloud, additional cost savings are made.
