Sharing Medical Information Safely and Securely

November 29, 2011 – When most listeners think of capturing data, they normally think of the end game being creating business intelligence and transferring that knowledge to graphs and, perhaps, using that information to predict future behavior (predictive analytics).

November 29, 2011 – When most listeners think of capturing data, they normally think of the end game being creating business intelligence and transferring that knowledge to graphs and, perhaps, using that information to predict future behavior (predictive analytics). Shaliesh Patel's company, CNSI, has a track record of helping federal agencies collect medical information to save money and improve service to citizens.
